

ROYAL FILTERMIST MIST COLLECTORS

**LOW-COST, HIGHLY EFFICIENT,
AND MINIMAL MAINTENANCE!**

Designed specifically to collect oil mist and smoke produced by metalworking machinery, the Royal Filtermist simply does the best job, over a longer period of time, for the lowest cost.

Royal Filtermist Mist Collectors

WHY IS THE ROYAL FILTERMIST THE BEST CHOICE FOR THE METALWORKING INDUSTRY?

Low Operating Costs

The Royal Filtermist is cost-effective to own and operate. Other types of systems (media, electrostatic, etc.) require frequent maintenance and costly filter replacement. Companies that sell these types of units often push expensive maintenance contracts that can far exceed the initial purchase price. Filtermist also consumes very little electrical power compared to other systems. In fact, the tighter the machine enclosure, the lower the power draw.

High Efficiency

The Royal Filtermist maintains a continuous high efficiency (98%+). Performance does not decrease with use.

Easy to Install

Multiple installation configurations allow the Filtermist to overcome almost any mounting obstacle.

Wide Range of Sizes

Four sizes ranging from 300–1200 cfm are available to suit all applications.

Strong Technical Support

A large network of local distributors and regional managers strategically located throughout the country provide quick and accurate on-site technical support.

No Heat/AC Waste

With our closed-loop system, processed air is returned to the shop, reducing heating and cooling costs. A/C service calls are also reduced by protecting intake filters from contaminants.

Heavy-Duty Construction

When you purchase a Royal Filtermist, you receive a quality product. Features found on all units include:

- Heavy-duty IE3 three-phase motors that meet all federal, state and local electrical and safety codes.
- All exposed surfaces on the drum and housing are powder coated for wear resistance and long life.
- Very tight manufacturing tolerances provide precise fits between mating parts and ensure that the unit will provide years of trouble-free service.

Low Maintenance

Because the unit works on a mechanical principle instead of electrostatics or multi-stage filters, the Royal Filtermist requires significantly less maintenance than most other filtration systems on the market. The small amount of regular maintenance that is required can be easily performed by the customer.

Flexibility

Units are portable and typically service individual machines, allowing machines to be easily moved or replaced. Large central systems are connected to multiple machines by costly and non-flexible ductwork, making relocation difficult.

Modular Design

The Royal Filtermist is a modular system. Accessories such as after filters and dust cyclones can be easily added as applications require.

Proven Worldwide

There are over 150,000 units currently operating in over 50 countries worldwide, making Filtermist the world leader in metalworking pollution control equipment.

5-year Warranty

Every Royal Filtermist unit carries a 5-year warranty against failure due to manufacturing defects. Other brands are only protected for 1–2 years. Please note that our warranty does not include normal wear and tear items such as drum pads, silencers, ductwork, etc. The motor carries a one-year warranty.

Vibration Control

The Royal Filtermist incorporates unique features to help it overcome vibration-related problems that are sometimes associated with other centrifugal impaction type systems:

- All drums are dynamically balanced at the factory and tested before shipping.
- Vertical drum arrangement provides even mass distribution.
- Motor is connected to housing with four neoprene mounts, effectively isolating vibration and controlling startup torque.

Same-Day Shipping

Royal maintains a large inventory to ensure same-day shipping on virtually all orders.
