- ✓ **In-Stock: Same-Day Shipping!**

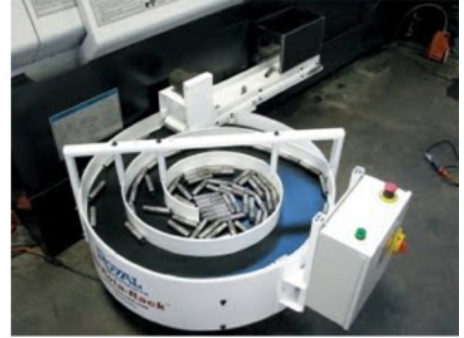

## Around-The-Clock Unmanned Production

5:00 PM Tuesday

11:00 PM Tuesday

6:00 AM Wednesday

There are 168 production hours in a week, but most shops only use about 40 of them. If your bar-fed CNC lathes produce about \$100 per hour, you could be **making an extra \$12,800 per week** on each one equipped with a Rota Rack.

## A Rota-Rack for Every Machine

The Royal Rota-Rack easily adapts to any bar-fed CNC lathe.

## Simple Plug-and-Play Setup

Simply Equip Your Bar-Fed CNC Lathe with a Royal Rota-Rack Parts Accumulator...

Plug it in...

...and Make Tons of Additional Profit Starting on Your Very First Night!

We often refer to the Rota-Rack as “**Off-the-Shelf Automation**” because it is such a breeze to install. In fact, most users report having it **up and running within an hour of unpacking** it from the shipping crate.

Each Rota-Rack ships with its height and orientation preconfigured according to customer specifications. Since **the unit doesn't need to connect to the lathe physically or electrically**, installation is simply a matter of attaching the legs, sliding it into place in front of the machine, and plugging it into a standard 110v outlet.
